| RESEARCH INTERESTS | My research interests lie in the interface of Optimization and Control, Machine Learning and Game Theory, and Probability and Statistics. Particularly, I am interested in developing reinforcement learning approaches for optimally controlling constrained and multi-agent dynamical systems, with applications in autonomous decision-making systems, toward a vision of safe, reliable, and trustworthy artificial intelligence systems. Also, I am interested in understanding other practical optimization and control problems, and developing adaptive, robust, and resilient algorithms to tackle them. | |
